

CLAIMS:

1. A resin composition obtained by blending a thermoplastic resin that can be melt-extruded at a solubility parameter of not smaller than 9.5 with an organic oxidizing component and with a transition metal catalyst, said organic oxidizing component being a polyene having a functional group on a side chain or at a terminal thereof.
2. A resin composition according to claim 1, wherein said the thermoplastic resin is a gas-barrier resin having an oxygen permeation coefficient of not larger than 7 cc·mm/m<sup>2</sup>·day·atm (20°C, 0%RH).
3. A resin composition accoring to claim 1, wherein said thermoplastic resin is a polyamide resin or an ethylene-vinyl alcohol copolymer.
4. A resin composition according to claim 1, wherein said thermoplastic resin is a xylylene group-containing polyamide resin having a concentration of amino end groups of not smaller than 40 eq/10<sup>6</sup> g.
5. A resin composition according to claim 1, wherein said organic oxidizing component is a polybutadiene or a polyisoprene modified with a maleic acid or with an anhydride thereof.
6. A resin composition according to claim 1, wherein said organic oxidizing component is dispersed in the thermoplastic resin, and the dispersant thereof has a minimum length of not larger than 400 nm.
7. A resin composition according to claim 1, wherein said transition metal catalyst is an organic salt of cobalt and is contained at a concentration of not smaller than 300 ppm calculated as a metal.
8. A multi-layer container having at least one oxygen-absorbing layer of a resin composition of claim 1.
9. A multi-layer container according to claim 8,

10003228-120601

wherein a layer of a polyolefin resin is formed on at least on side of said oxygen-absorbing layer.

10. A multi-layer container according to claim 8, wherein a layer of a thermoplastic polyester resin is  
5 formed on at least one side of said oxygen-absorbing layer.

11. A multi-layer container according to claim 9, wherein said polyester resin layer has a half-value width of an X-ray diffraction profile of not larger than 15°.

10 12. A multi-layer container according to claim 9, wherein said thermoplastic polyester resin has a crystallinity of from 30 to 55%.
